Summary

I'm **Urvish Mandaliya**, a **full-stack web developer** with **two years of hands-on experience** in **Laravel** and **Vue.js**. I have developed scalable and robust web applications that provide functionality as well as a seamless user experience. My experience includes developing efficient back-end systems and RESTful APIs with Laravel and designing responsive and user-friendly interfaces with Vue.js. I believe in writing clean and maintainable code and love solving difficult problems by implementing innovative solutions. With a rigorous attention to detail and an emphasis on quality, I ensure that each project is of the highest standard. I also love coding with new tools like **Tailwind CSS** and **Pinia**, and I always strive to increase performance, security, and scalability in the stack. I am constantly trying new features and frameworks to stay ahead in the dynamic web environment. My goal is to create products that not only work perfectly but also provide lasting value to users and businesses.

Languages

- English
- Hindi

Hobbies

- Playing & watching cricket
- Coding
- Listening music

Skills

DESIGN TOOLS

Figma

TECHNOLOGY I USE

Laravel Vue.js Nuxt.js PHP JavaScript

TypeScript Pinia VueX Laravel Livewire Laravel Nova

Tailwind Bootstrap jQuery HTML CSS

DATABASE STACK

MySQL SQLite PostgreSQL MongoDB

DEVOPS STACK

Linux AWS DigitalOcean Docker Laravel Forge

Apache Nginx

DEVELOPMENT & PRODUCTIVITY I USE

VS Code GitHub Postman ChatGPT

Experience

Full Stack Web Developer

Clavier Technologies 2023-Pursuing

- I gained experience working with different web development tools and frameworks, especially Vue.js, Nuxt.js, Laravel, and Tailwind CSS.
- I built reusable Vue.js components and used directives and mixins to make our frontend code more functional and easier to maintain.
- I improved the efficiency and speed of our applications by optimizing database schemas and queries using Laravel's Eloquent ORM.

Projects

Online Exam System

- Developed an online exam system with a modern, responsive frontend using **Vue.js** and **Tailwind CSS** for seamless user experience. Implemented state management with **Pinia**, interactive features with **Vue-Draggable**, pagination with **Vue-Awesome-Paginate**, and notifications using **Vue3-Toastify**.
- Backend built with **Laravel**, utilizing core features such as Eloquent ORM and **Websockets** for real-time functionality. Emphasized clear, maintainable code structure to ensure scalability and ease of collaboration with other developers.

Online Food Market

- Developed an Online Food Ordering System using Laravel, featuring user authentication with **Laravel Sanctum** for secure login and session management. Designed clean and modular **CRUD** operations for managing products, orders, and categories to ensure a smooth admin experience.
- Integrated **Razorpay** for secure and efficient online payment processing, enabling customers to complete transactions seamlessly. Focused on writing maintainable, scalable backend logic with Laravel's Eloquent ORM and built-in validation.

 [laravel-backend](#)

Ecommerce

- Built a dynamic E-commerce web application with Nuxt.js and custom CSS, focusing on responsive design and smooth user experience. Implemented product filtering, listing, and intuitive UI for efficient product discovery and navigation.
- Developed a lightweight backend using Core PHP to handle CRUD operations for products, categories, and orders. Ensured clean API integration with Nuxt frontend for seamless data handling and user interaction.
